INFO 101

Me and My Digital Life (T1 2026)

Assignment 2: Data Analysis Assignment (35%)

Due: Friday 8th May, 5:00 PM

Assignment Specification

Overview:

Using the provided data set, **process raw data into information, then transform information into knowledge**. Communicate this knowledge to an audience through an infographic created in Canva (<https://www.canva.com/>).

The **audience** for your infographic is the person who owns the data. The 'Reader.' They are curious to learn about their own reading habits, patterns, trends, and behaviours. Your focus for the infographic should be to help them quickly and easily understand descriptive insights through data visualisations, explaining what these insights mean, and highlighting a call for action.

The narrative in your infographic should conclude with a short commentary on what the presented insights mean (i.e., what does this tell the reader that they didn't ready know about their reading?)

To achieve these objectives, you will need to familiarise yourself with the data set, explore patterns or trends in the data (you may need to experiment with different approaches!), decide an infographic format that best communicates the visualisation of information, craft a narrative that best communicates what is learned from the information, and recognise the limitations of the available data.

Please consult the rubric to review how these objectives will be evaluated.

Your task:

Access the dataset in Nuku. **It is the same dataset you have been working with through workshops.** It contains augmented data from a readers' Libby borrowing history between 2020 and 2025. All listed texts are audiobooks borrowed from Wellington City Library and the Lower North Island library. The standard loan term is 21 days (3 weeks), after which time the audiobook gets automatically returned regardless of whether the borrower has finished reading it.

Alternatively, you may use your own data from whichever reading platform you use, if you can get it and if you have at least 100 items in your borrowing history. Platforms could include Spotify or Audible for audiobooks, or Amazon Kindle or Apple books for e-books. You could also check to see if your library has an electronic record of your borrowing available for download. Please check with the INFO101 teaching team or tutors if you need any help understanding your exported data.

Get started:

1. Explore the data set.
2. Organise the data set in a way that makes sense to you (e.g., splitting calculations for specific insights across to a new sheet separating years or months or genres, collapsing/hiding columns with less relevant metadata, etc).
3. Begin exploring descriptive insights.

Then:

4. Select one descriptive insight to focus on. Delve into the story it contains.
 - For instance, in the workshop example, we saw that February 2024 presented a notable spike in borrowed items and conducted further exploration to see this was because the reader borrowed 9 mystery novels in quick succession. We then pursued two theories to understand what this pattern meant and how it could be meaningful for the reader.
5. Consider how you might communicate this story using at least three data visualisations. Note: For the purpose of this assignment, a “visualisation” is a bar chart or pie chart.
 - Which order should your visualisations be communicated in?
 - Which format(s) makes the most sense?
 - What context will you need to include (i.e., additional/supporting statistics and design features?)
 - See the StatsNZ infographics from the week 6 lecture for examples of how descriptive insights can support context.
 - How will you annotate the information and communicate knowledge?
6. Produce an infographic to capture these insights, relevant context, and offer a useful conclusion to your reader. The infographic should include a minimum of three data visualisations.

Reminder: You are using the same dataset as in the workshops. Please note you cannot use the visualisations/insights produced during your workshop in your assignment submission. You need to find a different narrative to explore!

Your submission should include:

- Your infographic, submitted as an editable ‘share’ link from Canva (see Submission instructions below).

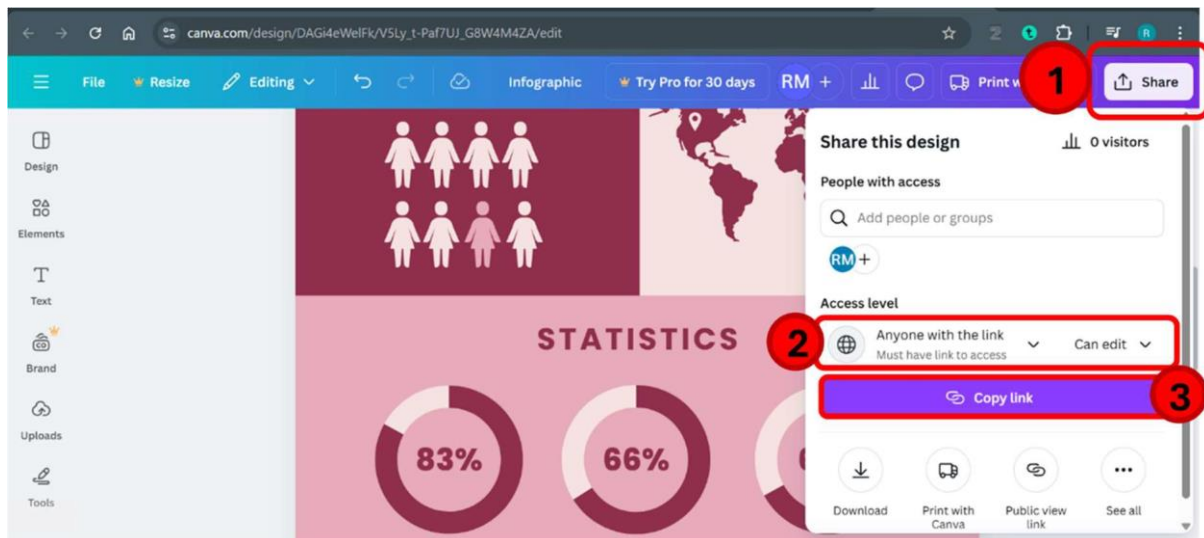

Submission instructions

Upload a document with an online link to your infographic (from Canva)

In your Canva editor window:

1. Click “share”

2. Change the Access Level to “anyone with the link” and “can edit,”
 - a. Allowing ‘edit’ access means the markers can access the data inputs for your visualisations. **Make a backup/duplicate of your original work** if you do not wish to provide ‘edit’ access to your only copy. Tutors can support you in this process if required.
3. “Copy link”
4. In Nuku, open the assignment submission portal and paste your Canva link.

Important note: Please share your infographic by copied Canva link only. Save a copy of your work for your own records.
